

Step 1. Take off the top cover of Cypher. (Remove 4 screws in the back and 2 screws in the front)

Step 2. Take the view module off the Cypher. (Remove 2 screws)

Step 3. Take the view module apart into 2 parts. (Remove 4 screws at the bottom of the module)

**Don't adjust any other thing aside from the 4 screws that circled in the photo below.**

Step 4. Now you can visually inspect if there's any dirt on the lenses/mirrors etc. and clean them.

**Although try to not touch the metal rings that highlighted below in the photo, otherwise the focus might be messed up.**

That should work, hopefully! /wink
